EDUCATION

Iowa State University

Bachelor of Arts in Computer Science

Ames, IA

2023 – 2026

TECHNICAL SKILLS

Frontend: React, React Native, TypeScript, JavaScript, TailwindCSS, HTML, CSS, Electron

Backend: Node.js, Express, Spring Boot, PostgreSQL, MySQL, MongoDB, REST APIs, WebSockets

Auth & Tools: JWT, OAuth2, Google OAuth2, Git, GitLab CI/CD, Docker, Postman, Android Studio

Concepts: UI/UX, Responsive Design, Component-Based Architecture, State Management, Cross-Platform Development, Agile, CI/CD

EXPERIENCE

Full-Stack / Frontend Engineer

Aug. 2025 – May 2026

Iowa State University

Ames, IA

- Built a responsive, cross-platform React Native and TypeScript application spanning web, mobile, and Electron desktop, delivering 6 core features including real-time staff chat and GitLab analytics for 120+ users.
- Developed a classroom management platform used by 120+ students and 10+ staff per semester, owning UI/UX design and client-side state management to consolidate attendance, grading, and task workflows into a single React Native interface.
- Consumed and integrated secure REST APIs across the React Native frontend, implementing JWT-based session handling, role-based UI rendering, and Google OAuth2 login flows to support distinct student and staff experiences.
- Integrated GitLab APIs to surface contribution compliance metrics for student teams; deployed via GitLab CI/CD automation, reducing manual reporting overhead by 40%.

IT Operations Specialist

May 2024 – Sep. 2024

ICS Advanced Technologies

Ames, IA

- Automated data entry and customer support workflows by building Tampermonkey browser scripts, cutting average call time by 1 minute and 20 seconds across all support staff.
- Configured and maintained network infrastructure serving 100,000+ users, sustaining a 99% first-call resolution rate for hardware and software issues.

PROJECTS

Lusiant

June 2024

React.js, Node.js, MySQL, JavaScript, TailwindCSS

- Built a full-stack e-commerce platform in React.js and TailwindCSS with payment processing, a customer rewards system, and support ticket management, accelerating UI delivery by 40% through a shared component library.
- Designed responsive UI/UX for 4 core workflows including purchasing and inventory management, achieving a consistent design system across all flows using TailwindCSS.
- Architected a component-based React.js UI using reusable form, table, and modal components, reducing redundant UI code by 35% and accelerating feature delivery across the purchasing and account management workflows.

MusiQuest

January 2023

Java, Android Studio, MongoDB, WebSockets

- Built a real-time multiplayer app using WebSockets to synchronize live music competitions and leaderboards across classrooms, supporting 40 concurrent users with sub-100ms state updates.
- Engineered the WebSocket communication layer with a focus on performance optimization, keeping game state synchronized across all connected devices with sub-100ms latency and eliminating visible desync during live sessions.

Hotel ERP System

September 2025

Java, OOP, MVC, JSON Persistence

- Built a Java ERP simulation modeling 7 hotel workflows including booking and payroll, applying MVC architecture to keep UI logic cleanly separated across 25+ controllers.
- Delivered 30+ domain-driven UI views with clean separation between display logic and business state, implementing custom JSON persistence to enable session continuity across the application without a live database.
